TOP 100 latest Hindi Dubbed Bollywood movies. Top 100 latest Hindi Dubbed Bollywood movies Category: Indian Hindi-language films Category: Indian film series Category: Hindi film remakes using chemotherapy, or with disease progression during a phase of taxane therapy. A meta-analysis on 15 studies with 3,081 total patients and two and three-year OS rates of 22.9% and 13.9% was performed. The more recent studies were not included in this meta-analysis. The analysis was then repeated after the studies with the best outcomes had been excluded. The results of this second analysis were similar to those of the initial meta-analysis. The most common toxicities were nausea, vomiting, mucositis, and diarrhea. Some patients experienced neurotoxicity, specifically headache and dizziness. The MINDACT trial randomized 1,321 women with stage I--IIIC HER2-negative breast cancer to anthracycline-based therapy with or without trastuzumab. Median follow-up was 62 months. The overall OS was not significantly different between the two groups (hazard ratio  $\backslash$ [HR], 0.85; 95% CI, 0.71--1.02; P =.077). At the time of study design, the MINDACT protocol was amended to exclude patients with poor performance status (ECOG  $\geq$  3). The updated analysis of 1,093 patients with a median follow-up of 91.7 months included 539 patients with ECOG performance status of 0 and 0.89% (n = 5) of patients had an OS of 6.6 years. More patients with hormone receptor-negative tumors were in the control arm. The updated data are promising but should be interpreted with caution. This is an open-label study, and although the initial trial showed benefit from trastuzumab in both hormone receptor-positive and negative tumors, the benefit did not differ between groups. The improvement in OS in the second analysis may have been due to the exclusion of patients with poor ECOG status. Furthermore, approximately one-third of the patients in the control arm of the MINDACT trial were hormone receptor positive and were not offered trastuzumab, whereas more than 90% of patients in the TAX-Neo adjuvant trial were hormone receptor negative. Thus, the control arm of the MINDACT trial likely
